Profile

Dedicated and results-driven Information and Network Security graduate and aspiring Junior SOC Analyst with a strong foundation in network security, intrusion detection, and vulnerability assessment. Highly proficient in Blue Team operations, including real-time alert monitoring, comprehensive log analysis, and structured incident investigation. Hands-on practitioner experienced with industry-standard tools such as Suricata, Wireshark, OpenVAS, and the ELK Stack, developed through rigorous academic projects, specialized bootcamps, and professional internships.

Professional Experience

- **Al-Nashama Cyber Camp (NCSCJO) — Bootcamp Trainee | Feb 2026 – Jun 2026**
 - Completed an intensive 440-hour cybersecurity training program with industry experts.
 - Practiced ethical hacking and security testing on simulated live systems.
 - Monitored security alerts and responded to simulated cyber threats daily.
 - Completed professional training tracks for SOC analysts and penetration testers.
- **Vardot — DevOps / Security Intern | Apr 2025 – Jun 2025 | Amman, Jordan**
 - Set up and managed system log analysis using the ELK Stack.
 - Used the Linux command line daily to manage files and system settings.
 - Monitored company infrastructure to ensure high performance and security.
 - Helped teams track system issues and find quick solutions.
 - Followed company security rules during server updates and deployments.

Key Projects

- **Capstone Security Assessment — CVE Exploitation & Mitigation Lab | June 2026**
 - Successfully reproduced and fixed three major security vulnerabilities in an isolated virtual lab.
 - Exploited an Apache path traversal flaw to achieve remote code execution without authorization.
 - Bypassed initial software patches using double-encoding techniques.
 - Escalated user privileges to full root access using a known system vulnerability.
 - Applied proper configuration patches and tested them to ensure the system was secure.
 - Set up a Wazuh SIEM monitoring tool with custom rules to detect similar attacks.
 - Captured and analyzed network traffic evidence using packet capture tools.
 - Technologies Used: Kali Linux, Wazuh, Apache, curl, tshark, VMware Workstation.
- **Secure Chat Application — Graduation Project | 2025**
 - Built a secure, real-time messaging platform focused on privacy and user security.
 - Implemented end-to-end message encryption to keep private chats completely safe.
 - Secured all active network communications using TLS to prevent data interception.
 - Added multi-factor authentication with passwords and USB tokens for users.
 - Created one-time password login channels specifically for administrators.
 - Added encrypted file-sharing and secure file deletion capabilities.
 - Integrated steganography tools for hiding secret messages inside media files.
 - Core Technologies: Client-server architecture, AES-GCM, TLS, MFA, OTP.

Academic Background

- B.Sc. in Information and Network Security | World Islamic Sciences & Education University (WISE), Amman, Jordan | 2021 – 2025

Technical Skills

- Operating systems and command-line navigation
- Security log analysis and alert monitoring
- Network traffic analysis and packet capture
- Vulnerability assessment and scanning
- Virtualization and lab environment setup
- Basic penetration testing and exploitation
- System troubleshooting and maintenance

Professional Skills

- Incident triage and response workflows
- Threat identification and risk analysis
- Security compliance and framework guidelines
- Technical documentation and report writing
- Infrastructure monitoring and maintenance
- Help desk support and ticket management
- Self-directed research and continuous learning

Personal Skills

- Strong analytical and problem-solving mindset
- Effective teamwork and collaboration
- Clear communication and customer service
- Adaptability in fast-paced environments
- Attention to detail in critical tasks
- Time management and prioritization
- Eagerness to acquire new technical knowledge

Certifications & Training

- **SOC Analyst Tier 1 — Cyber Ranges | Apr 2026 – May 2026**
 - Completed a comprehensive, hands-on SOC training curriculum covering live threat detection, log analysis, incident triage, and foundational penetration testing inside a live cyber range environment.
- **CompTIA Security+ (Studied)**
 - Focused on core cybersecurity domains, including emerging threat landscapes, foundational cryptography, identity governance, and risk management principles.
- **TCM Security — Linux 100**
 - Mastered essential Linux fundamentals, system navigation, file management, advanced permissions, and basic system administration concepts.
- **TCM Security — Practical Help Desk**
 - Gained operational knowledge of IT support best practices, diagnostic troubleshooting, ticketing workflows, and customer service delivery in help desk environments.
- **TryHackMe — SOC Level 1 Learning Path (Studied)**
 - Self-studied core blue-team modules covering Cyber Defense Frameworks, Threat Intelligence, SIEM fundamentals, and DFIR.
